Acccoat Medical develops, manufactures and distributes high quality appliances for the medical industry.

Manufacturing of guide wires. Disposable items such as guide wires directly apply to fields such as urology, radiology and angiology. The products are sold either in bulk to OEM manufacturers within the medical industry or individually in sterile packaging in compliance with Annex II - directive 93/42/EEC. Guide wires are made from stainless steel and supplied with or without PTFE coatings.

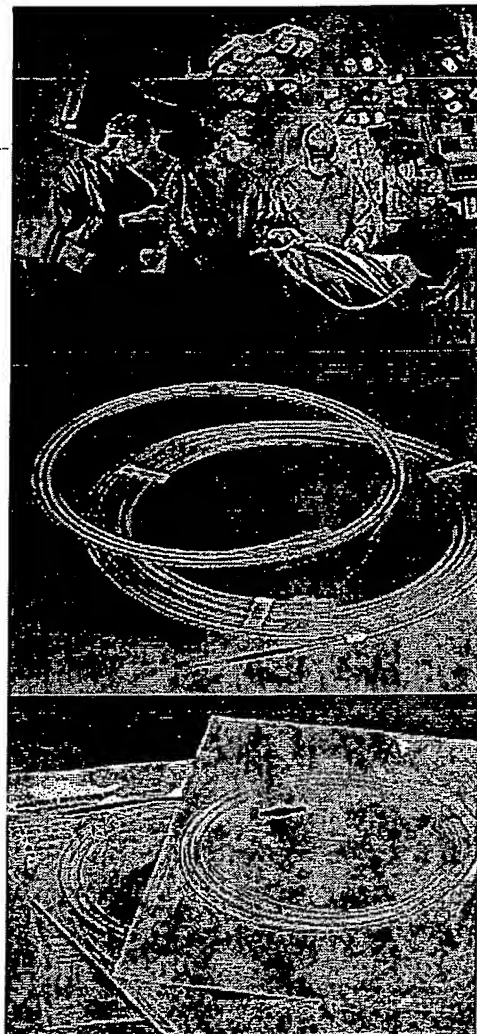

Acccoat Medical contributes to the manufacturing of other companies' medical devices by applying coatings to improve functionality. Items for the medical industry are coated where low-friction surfaces are necessary, for example on guide wires or hypodermic needles. All PTFE coatings are tested for cytotoxicity.

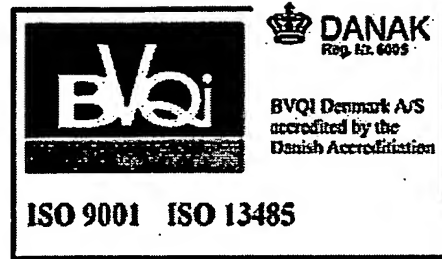

Clean-room production. All Acccoat Medical products are manufactured in controlled clean rooms in accordance with fixed routines. The staff are trained in correct cleaning and proper handling of products in accordance with applicable medical norms.

Packaging programme. Acccoat Medical has developed a highly flexible packaging programme. For example, guide wires are deliverable either in dispensers or as 100% sterilized "private label" supplies.

Certificates. In the autumn of 2003 Acccoat Medical's certification was upgraded in accordance with the newest standards: ISO 9001:2000 and ISO 13485.
